

# Could it be Measles?

Fever AND rash AND symptoms such as nasal stuffiness, runny nose, sneezing, sore throat OR a cough OR conjunctivitis??

**If you suspect measles, RING the surgery.**

This is a highly contagious condition spread through the air when an infected person coughs or sneezes. It is so contagious that if one person has it, 9 out of 10 people of all ages, around him or her will also become infected if they are not protected.

**Do not attend the surgery without  
express permission from the surgery.**

For any patients who need to be seen face to face, arrangements will be made to keep you, the staff and other patients safe.
